Engagement by Hashtag Counts

Insights

- 1 . The account maintains moderate engagement (14.24 avg), but performance varies significantly across posts.
- 2 . Tuesday shows the highest average engagement, followed by Wednesday and Thursday.
- 3 . Weekend posts (Saturday & Sunday) show comparatively lower engagement.
- 4 . September shows a significant engagement spike compared to other months.
- 5 . 51% posts are medium-performing, 34% high-performing, and 14% low-performing.
- 6 . Reels generate the highest engagement compared to carousels and images.
- 7 . Longer duration does not guarantee higher engagement; moderate-length reels perform better.
- 8 . Higher hashtag counts do not directly increase engagement; optimal range appears moderate.

Strategic Recommendations

- 1 . Focus on consistency by replicating top-performing content formats and reducing average-performing posts.
- 2 . Schedule high-priority content (reels, announcements, campaigns) on Tuesdays and mid-week days.
- 3 . Avoid posting important content on weekends or test lighter, experimental content instead.
- 4 . Analyze September's content type, theme, and format, and replicate similar strategies.
- 5 . Convert medium-performing posts into high performers through stronger hooks, better captions, and clear CTAs.
- 6 . Increase reel production and prioritize short-form video content.
- 7 . Keep reels concise and focus on delivering value quickly.
- 8 . Use 8–12 relevant and niche-specific hashtags instead of maximizing quantity.
